## JAYASWAL NECO INDUSTRIES LIMITED (METAL MINES DIVISION)

### 2.1 QUALITY MANAGEMENT SYSTEM

The company is working on four main components: quality planning, quality assurance, quality control and quality improvement. Quality management is focused not only on product and service quality, but also on the means to achieve it as per Quality Management System standard.

In this context, the company has already formulated Quality Management System (QMS) in all the mines and received ISO 9001-2015 certificate from Authorised International Agency and according to IMS system the quality management system is adopted and quality norms are discussed.

We have fullfledge Chemical laboratory at Metabodeli Mine and Chhotedongar mine for carrying out chemical analysis of iron ore where the bulk sampling is done for each stack and analysed. The Environment lab has also been set up for monitoring Air , Water and Noise.

In all other two mine samples are regularly analysed at our plant .

In all the allotted mine to the company, no mineral reject has been generated in the current year. In Metabodeli mine above 58% Fe grade ore is directly used in company's Integrated Steel Plant while below 58% Fe is stored for further beneficiation process. We are in the process of outsourcing the beneficiation process near village Gidhali which is about 100 m far away from Metabodeli mine.

As soon as the fullfledged production in Chhotedongar mine is started, the beneficiation of low grade mineral is proposed to be initiated.

In other two mines there sub-grade mineral is also used in JNIL' integrated steel plant at Siltara.

As a result the waste generation has been minimized. At present the ore to waste ratio is very low . The mineral of 45% to 63% Fe grade is being extracted from mine.

Lime stone extracted from Manpur Mine is being wholly consumed in the plant

Ti Iron ore extracted from Dhobitola mine is also being used in the plant.
